

GIS RNRICH PROGFRAM (MODULE 2)

Scrum Framework

History of Scrum

1986

The name Scrum is first introduced by management experts Ikujiro Nonaka and Hirotaka Takeuchi

History of Scrum

2010

The first Scrum Guide is first published

What is Scrum?

- Scrum is a framework that enables teams to work together
- With Scrum, teams can:
 - Learn from experiences
 - Self-organize working on problems
 - To reflect on their victories
 - And their losses to improve

What is Scrum?

Here are some of the benefits of Scrum:

Teams can provide project deliverables and in an efficient manner

Time and money are used efficiently

Projects are divided into smaller units called sprints

Works best for fast moving projects

What is Scrum?

Here are some of the benefits of Scrum:

Scrum meetings provide the team great visibility

Constantly involves feedback from clients and customers

Making changes based on feedback are very easy

Individual efforts of the team members are given focus

Scrum Team

A scrum team involves three roles:

Product Owner

Scrum Master

Scrum Team

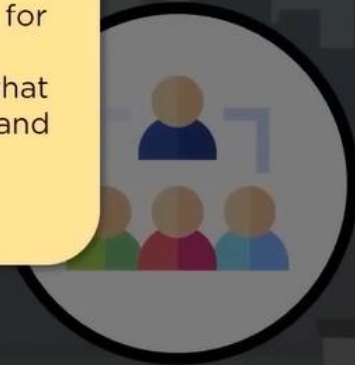

Scrum Team

A scrum team involves three roles:

Product Owner

The product owner is primarily responsible for maximizing the ROI by determining the product features, prioritizing it into a list, what needs to be focused on for the next sprint and constantly reprioritizing and refining it

Scrum Team

Scrum Master

Scrum Team

The Scrum master helps teams learn and apply scrum to obtain business value. He/ she helps remove impediments, protects them from interference and helps the team to adopt agile practices

Product Owner

Scrum Master

Scrum Team

Scrum Team

A scrum team involves three roles:

Product Owner

The Scrum team is a collection of individuals that work together to deliver the requirements of the stakeholders

Scrum Team

Scrum Master

Scrum Artifacts

Scrum Artifacts are components of the Scrum process that can improve transparency and understanding of the work. Three artifacts used in the process:

Product Backlog

Sprint Backlog

Product Increment

Scrum Artifacts

Scrum Artifacts are components of the Scrum process that can improve transparency and understanding of the work. Three artifacts used in the process:

Product Backlog

The product backlog consists of a list of

- new features
- changes to made to existing features
- bug fixes,
- changes to the infrastructure and several other activities that the team needs to deliver to ensure a particular outcome

Sprint Backlog

Product Increment

Scrum Artifacts

Scrum Artifacts are components of the Scrum process that can improve transparency and understanding of the work. Three artifacts used in the process:

Sprint Backlog

- Sprints refers to short periods of time during which a Scrum team aims to get a given amount of work done
- Sprints help teams deliver working software in a frequent manner
- Sprints could be between 1-4 weeks long

Product Backlog

Increment

Scrum Artifacts

Scrum Artifacts are components of the Scrum process that can improve transparency and understanding of the work. Three artifacts used in the process:

Sprint Backlog

- A subset of the product backlog, the sprint backlog contains tasks that the team aims to complete to satisfy the sprint goal
- The team first identifies tasks from the product backlog that need to be delivered to achieve a goal. These tasks are then added to the sprint backlog

Product
Backlog

Product
Increment

Scrum Artifacts

Scrum Artifacts are components of the Scrum process that can improve transparency and understanding of the work. Three artifacts used in the process:

Product Backlog

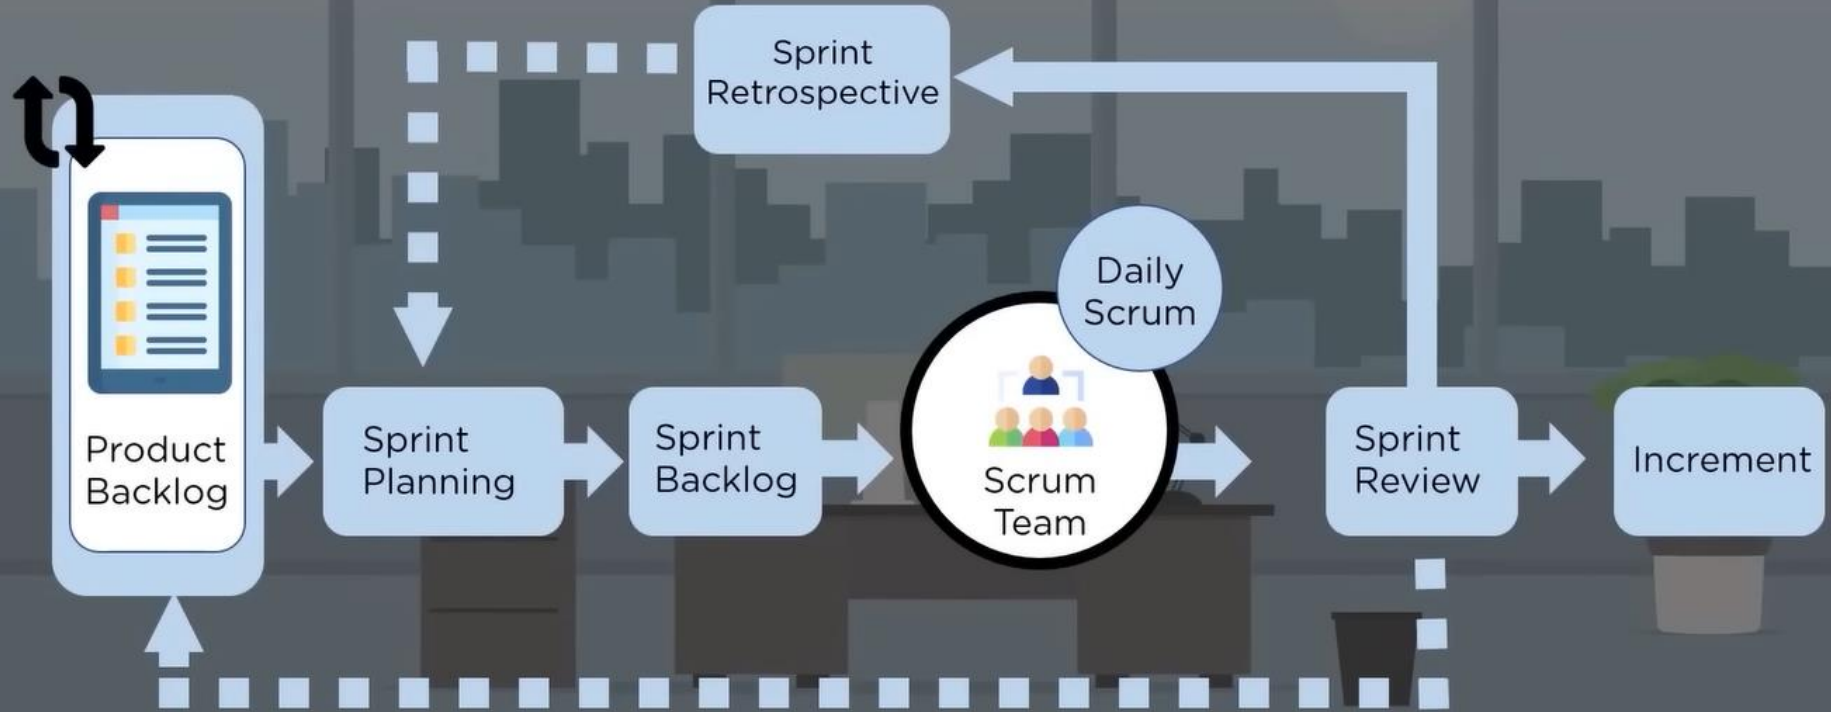

Sprint Backlog

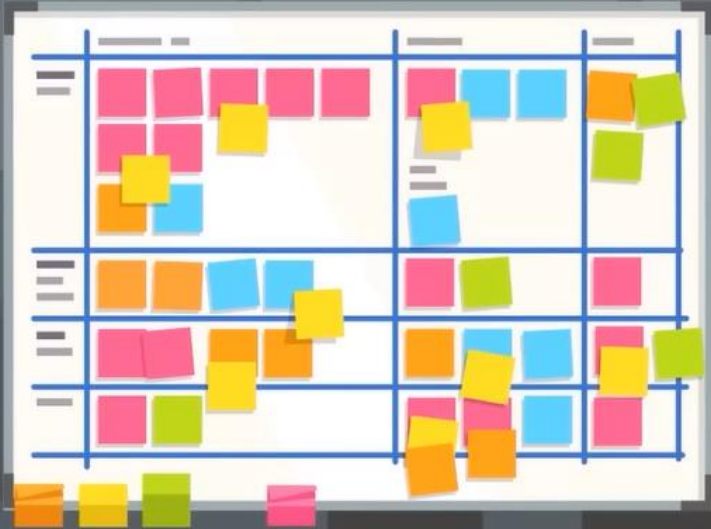

Product Increment

- The product increment is the combination of all product backlog tasks completed in a sprint and the value of increments of previous sprints
- The outcome should be in usable condition, even if the product owner doesn't decide to release it

Scrum Framework

Scrum Board

- The Scrum board, is a physical or virtual tool that helps team to visualize items in the sprint backlog

Scrum Board

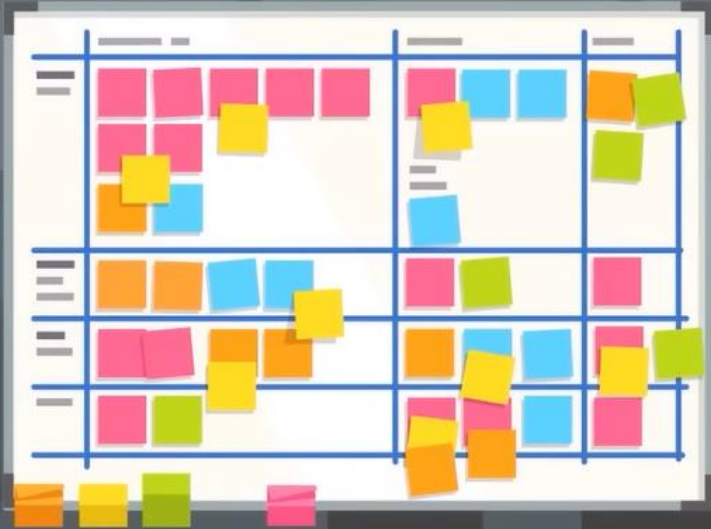

- The Scrum board, is a physical or virtual tool that helps team to visualize items in the sprint backlog
- It shows all action items during the daily scrum, helping keep the team focused on the tasks that need completion and their priorities

Scrum Board

- The Scrum board, is a physical or virtual tool that helps team to visualize items in the sprint backlog
- It shows all action items during the daily scrum, helping keep the team focused on the tasks that need completion and their priorities
- The scrum board is usually present in a place that's accessible to all team members and can be physical (whiteboard and stickers) or virtual (software tools)

Scrum Board

- The scrum board is divided into different slots like To-do, in progress and done
- When new sprints are started, the existing board is reset, and a new scrum board is created

Hi, team. Welcome to the daily stand-up meeting for the product team on project "Weather master."
